SUMMARY

Backend software engineer building APIs, SDKs, and cloud/data integrations with Python, Node.js, AWS, PostgreSQL, and Snowflake. Promoted from intern to associate after delivering production software for 3 enterprise customers; built a typed Python SDK spanning 100+ REST API endpoints.

EXPERIENCE

ALTR

Melbourne, FL

Associate Field Software Engineer - Data Governance & Security

Sep 2025 - Feb 2026

Field Engineering Intern

Aug 2024 - Aug 2025

- Promoted from intern to associate while delivering production software and integrations for 3 enterprise customers across ALTR APIs, Snowflake, PostgreSQL, and AWS.
- Designed, implemented, and tested backend integrations in Python, Node.js, and SQL connecting REST APIs, cloud services, databases, and third-party systems with authentication and explicit failure handling.
- Automated encryption of newly ingested Fivetran data in Snowflake using sync metadata, deterministic encryption, and idempotent processing, reducing the window in which raw PII remained exposed.
- Diagnosed and resolved API, authentication, database, and cloud issues using targeted test environments and structured logging, partnering directly with customers and internal engineers on implementation blockers.
- Built a Dockerized PostgreSQL validation environment with TLS/X.509 certificates, role impersonation, and session-role checks to reproduce production access patterns and verify least-privilege behavior.

Ditz Medical & Laser Aesthetics Center

Melbourne, FL

Manager

Jan 2020 - Jul 2024

- Managed day-to-day operations across scheduling, billing, inventory, staff coordination, and client communication in a fast-paced customer-facing environment.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, TypeScript

Backend & APIs: FastAPI, Node.js, REST API design, SDK development, Pydantic, authentication

Cloud & DevOps: AWS Lambda, Step Functions, S3, SQS, KMS, IAM, Docker, Terraform, GitLab CI/CD, Git

Data & Security: PostgreSQL, Snowflake, Alation, Fivetran, Athena, RBAC, tokenization, encryption

Testing & Reliability: pytest, MyPy, Ruff, pagination, retries, idempotency, structured logging

Applied AI: OpenAI API, tool calling, agent workflows, structured outputs

SELECTED ALTR ENGINEERING PROJECTS

Python SDK for ALTR APIs

- Designed and built a typed Python SDK spanning 100+ REST API endpoints for policy, access-control, and platform workflows.
- Architected a shared session layer and modular resource mixins with Pydantic models, authentication, alternate-host routing, pagination, retries, structured exceptions, logging, and GitLab CI with Ruff, MyPy, and pytest.

Pre-Ingestion PII Tokenization Pipeline

- Built a serverless data-processing workflow using Node.js, AWS Lambda, Step Functions, S3, Athena, Fivetran, Snowflake, and Terraform to protect sensitive data before warehouse ingestion.
- Designed checkpoint recovery, pagination, retries, persistent state, audit logging, and record-level validation to process tens of thousands of rows reliably within Lambda limits without skipping or duplicating records.

AI-Powered Enterprise Data Assistant

- Built a Python/Streamlit application using OpenAI tool calling across Snowflake, PostgreSQL, and Alation to turn natural-language requests into governed answers, tables, and charts.
- Separated metadata discovery, schema inspection, query execution, and response formatting into controlled tools with secure Snowflake RSA key-pair authentication and RBAC safeguards; resolved session-state and connector reliability issues.

EDUCATION

University of Central Florida - Data Analytics Bootcamp | Certificate

Aug 2023

University of Florida - Bachelor of Arts in Biology | Academic Scholarship

Dec 2018
